

Ryan Camilleri

Observational cosmologist

✉ uqrcamil@uq.edu.au 📍 The University of Queensland, Australia ☎ 0433 949 126 📠 0000-0002-7436-3950

Summary

I am a postdoctoral research fellow at The University of Queensland specialising in observational cosmology, with a focus on standard candle techniques using Type Ia supernovae and tests of beyond- Λ CDM models. I have strong experience building end-to-end cosmology pipelines for data analysis, simulation, and parameter inference alongside statistical analysis and model testing. I am also proficient working with established cosmological software frameworks such as COSMOSIS, SNANA, and COBAYA.

Education

PhD	The University of Queensland , Supernova Cosmology with the Dark Energy Survey	Brisbane, Australia June 2022 – Sept 2026
BSc (Honours)	The University of Queensland , Physics	Brisbane, Australia Feb 2021 – June 2022
Bachelor of Science	Griffith University , Physics & Mathematics	Gold Coast, Australia Feb 2017 – Dec 2020

Awards

Honourable Mention for Best Student Publication in Physics	2025
Awarded at The University of Queensland	
Dark Energy Survey “Builder”	2025
Recognition for contributions to the DES Collaboration	
Best Presentation - non-invited Speaker	2024
Awarded at the Frontiers and Gravitational physics conference in Portsmouth, England.	
Head of School Award for Excellence in Science	2020
Awarded to the Griffith University student in their final year with the highest career cumulative GPA in the Bachelor of Science (GPA 7.0).	
Australian Institute of Physics Prize	2020
Awarded to the most outstanding graduating student in a Physics major (GPA 7.0).	
Griffith Futures Scholarship	2020
Awarded to students who have been impacted by various types of educational disadvantage.	
Griffith Award for Academic Excellence	2017
Awarded to students who achieve a cumulative GPA of at least 6.0, calculated over the academic year. I received this award each year of my undergraduate degree.	

Conferences

Next Generation of SN Surveys Mini-Workshop	Oxford, United Kingdom
Presented my paper: Supernova Unite: Combining Pantheon+ and DES-SN5YR	
	July 2026

Supernova Cosmology: New Challenges and Opportunities Presented my paper: Supernova Unite: Combining Pantheon+ and DES-SN5YR	Seoul, South Korea June 2026
The End of Λ? Invited talk presenting both the DES supernova cosmology results and my current project, which is a combined DES & Pantheon+ analysis	Incheon, South Korea Sept 2025
Cosmic Flows Presented H_0 inverse distance ladder results	Brisbane, Australia Feb 2025
DES Spring Meeting Presented beyond- Λ CDM paper	Barcelona, Spain May 2024
Frontiers in Cosmology & Gravitational Physics Presented beyond- Λ CDM paper	Portsmouth, England May 2024
OzGrav ECR Winter School Attended the OzGrav ECR Winter School	Kingscliff, Australia Aug 2025

Publications

Supernova Unite: Constraints on cosmologies beyond-ΛCDM In preparation R. Camilleri et al.	2026
Supernova Unite: Combining Pantheon+ and DES-SN5YR R. Camilleri et al. (Submitted to Publications of the Astronomical Society of Australia)	2026
Supernova Unite: Host-Galaxy Mass Measurements of Type Ia Supernovae and Their Impact on Cosmology J. lee, R. Camilleri et al. (Submitted to Astrophysical Journal)	2026
DES Supernova Program: H_0 from the Inverse Distance Ladder R. Camilleri et al. (Monthly Notices of the Royal Astronomical Society)	2025
DES Supernova Program: Investigating Beyond-ΛCDM R. Camilleri et al. (Monthly Notices of the Royal Astronomical Society)	2024
DES Supernova Program: Reanalysis of Cosmology Results B. Popovic et al. (Monthly Notices of the Royal Astronomical Society)	2025
Dark Energy Survey: implications for cosmological expansion models from the final DES Baryon Acoustic Oscillation and Supernova data DES Collaboration (Physical Review D)	2025
Cosmological non-linearities as an effective fluid L. Giani, R. Camilleri et al. (Physical Review Letters)	2025

Activities

UQ-QASMT Research Mentoring Program

July 2025 – 2026

I guided a group of Year 10 students through an independent cosmology project, introducing them to Python coding, and helping them develop the skills to produce clear plots and reports that effectively communicate their results.

Dark Energy Survey

2022 – 2025

I organised and led tri-weekly international meetings, facilitating collaboration between Australia and UK teams.

UQ Astro Work Experience Program

2022 – present

The Astronomy group at The University of Queensland runs a weeklong work experience program (typically mid-year) and offers future STEM students who want careers in astronomy a first-hand look at the day-to-day life of an Astronomer. The week consists of an astronomy project, telescope demonstrations, “Meet the researcher” discussions and on the final day, the students get to present what they have learned to the group. Since 2022, I have volunteered to help organise and run this program.

Memberships

Dark Energy Survey (DES): Builder. The Dark Energy Survey is an international, collaborative effort to map hundreds of millions of galaxies, detect thousands of supernovae, and find patterns of cosmic structure that will reveal the nature of the mysterious dark energy that is accelerating the expansion of our Universe.

ARC Centre of Excellence for Gravitational Wave Discovery (OzGrav): Member. The mission of OzGrav is to capitalise on the historic first detections of gravitational waves to understand the extreme physics of black holes and warped spacetime, and to inspire the next generation of Australian scientists and engineers through this new window on the Universe.

Dark Energy Spectroscopic Instrument (DESI) Collaboration: Member. DESI seeks to map the large-scale structure of the Universe over an enormous volume. Targeting about 30 million pre-selected galaxies across one-third of the night sky, scientists will use DESI’s redshifts data to construct 3D maps of the universe.
